Practice Test 2

Group by, Order By, Having Clauses

Question 1:

Create a Table for Account details with below data.

        Account no – primary key, int
        Customer name - String,
        Address - String,
        Branch no - int
        Type - String,
        opdate date,
        balance int

Account number should be auto increment from default value 1000.

Insert values into table.

Query:
1. find total number of accounts segregated on basis of account type per branch.
2. Find out customer having more than one account type in bank.
3. find the total number of accounts of each branch
4. find the number of accounts opened in each branch after 2012-10-10, only if number of accounts opened is more than one
5. find out number of accounts at each branch in order of branch number.
